IMPORTANT NOTIFICATION

International application No.

PCT/EP 00/03096

International filing date (day/month/year)

07/04/2000

Priority date (day/month/year)

07/05/1999

Applicant

KONINKLIJKE KPN N.V.

1. The applicant is hereby notified that this International Preliminary Examining Authority considers the following date as the date of receipt of the demand for international preliminary examination of the international application:

25/09/2000

2. This date of receipt is:

- ☒ the actual date of receipt of the demand by this Authority (Rule 61.1(b)).
☐ the actual date of receipt of the demand on behalf of this Authority (Rule 59.3(e)).
☐ the date on which this Authority has, in response to the invitation to correct defects in the demand (Form PCT/IPEA/404), received the required corrections.

3. ☐ **ATTENTION:** That date of receipt is **AFTER** the expiration of 19 months from the priority date. Consequently, the election(s) made in the demand does (do) not have the effect of postponing the entry into the national phase until 30 months from the priority date (or later in some Offices) (Article 39(1)). Therefore, the acts for entry into the national phase must be performed within 20 months from the priority date (or later in some Offices) (Article 22). For details, see the *PCT Applicant's Guide*, Volume II.

- ☐ (If applicable) This notification confirms the information given by telephone, facsimile transmission or in person on:

4. Only where paragraph 3 applies, a copy of this notification has been sent to the International Bureau.

Check-boxes reserved for designating States which have become party to the PCT after issuance of this sheet:

- ☐
- ☐

Precautionary Designation Statement: In addition to the designations made above, the applicant also makes under Rule 4.9(b) all other designations which would be permitted under the PCT except any designation(s) indicated in the Supplemental Box as being excluded from the scope of this statement. The applicant declares that those additional designations are subject to confirmation and that any designation which is not confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. (Confirmation (including fees) must reach the receiving Office within the 15-month time limit.)

Supplemental Box

If the Supplemental Box is not used, this sheet should not be included in the request.

1. If, in any of the Boxes, the space is insufficient to furnish all the information: in such case, write "Continuation of Box No. ..." [indicate the number of the Box] and furnish the information in the same manner as required according to the captions of the Box in which the space was insufficient, in particular:

- (i) if more than two persons are involved as applicants and/or inventors and no "continuation sheet" is available: in such case, write "Continuation of Box No. III" and indicate for each additional person the same type of information as required in Box No. III. The country of the address indicated in this Box is the applicant's State (that is, country) of residence if no State of residence is indicated below;
- (ii) if, in Box No. II or in any of the sub-boxes of Box No. III, the indication "the States indicated in the Supplemental Box" is checked: in such case, write "Continuation of Box No. II" or "Continuation of Box No. III" or "Continuation of Boxes No. II and No. III" (as the case may be), indicate the name of the applicant(s) involved and, next to (each) such name, the State(s) (and/or, where applicable, ARIPO, Eurasian, European or OAPI patent) for the purposes of which the named person is applicant;
- (iii) if, in Box No. II or in any of the sub-boxes of Box No. III, the inventor or the inventor/applicant is not inventor for the purposes of all designated States or for the purposes of the United States of America: in such case, write "Continuation of Box No. II" or "Continuation of Box No. III" or "Continuation of Boxes No. II and No. III" (as the case may be), indicate the name of the inventor(s) and, next to (each) such name, the State(s) (and/or, where applicable, ARIPO, Eurasian, European or OAPI patent) for the purposes of which the named person is inventor;
- (iv) if, in addition to the agent(s) indicated in Box No. IV, there are further agents: in such case, write "Continuation of Box No. IV" and indicate for each further agent the same type of information as required in Box No. IV;
- (v) if, in Box No. V, the name of any State (or OAPI) is accompanied by the indication "patent of addition," or "certificate of addition," or if, in Box No. V, the name of the United States of America is accompanied by an indication "continuation" or "continuation-in-part": in such case, write "Continuation of Box No. V" and the name of each State involved (or OAPI), and after the name of each such State (or OAPI), the number of the parent title or parent application and the date of grant of the parent title or filing of the parent application;
- (vi) if, in Box No. VI, there are more than three earlier applications whose priority is claimed: in such case, write "Continuation of Box No. VI" and indicate for each additional earlier application the same type of information as required in Box No. VI;
- (vii) if, in Box No. VI, the earlier application is an ARIPO application: in such case, write "Continuation of Box No. VI", specify the number of the item corresponding to that earlier application and indicate at least one country party to the Paris Convention for the Protection of Industrial Property or one Member of the World Trade Organization for which that earlier application was filed.

2. If, with regard to the precautionary designation statement contained in Box No. V, the applicant wishes to exclude any State(s) from the scope of that statement: in such case, write "Designation(s) excluded from precautionary designation statement" and indicate the name or two-letter code of each State so excluded.

3. If the applicant claims, in respect of any designated Office, the benefits of provisions of the national law concerning non-prejudicial disclosures or exceptions to lack of novelty: in such case, write "Statement concerning non-prejudicial disclosures or exceptions to lack of novelty" and furnish that statement below.

Deborah Nicole

Supplemental Box

If the Supplemental Box is not used, this sheet should not be included in the request.

1. If, in any of the Boxes, the space is insufficient to furnish all the information: in such case, write "Continuation of Box No. ..." [indicate the number of the Box] and furnish the information in the same manner as required according to the captions of the Box in which the space was insufficient, in particular:

- (i) if more than two persons are involved as applicants and/or inventors and no "continuation sheet" is available: in such case, write "Continuation of Box No. III" and indicate for each additional person the same type of information as required in Box No. III. The country of the address indicated in this Box is the applicant's State (that is, country) of residence if no State of residence is indicated below;
- (ii) if, in Box No. II or in any of the sub-boxes of Box No. III, the indication "the States indicated in the Supplemental Box" is checked: in such case, write "Continuation of Box No. II" or "Continuation of Box No. III" or "Continuation of Boxes No. II and No. III" (as the case may be), indicate the name of the applicant(s) involved and, next to (each) such name, the State(s) (and/or, where applicable, ARIPO, Eurasian, European or OAPI patent) for the purposes of which the named person is applicant;
- (iii) if, in Box No. II or in any of the sub-boxes of Box No. III, the inventor or the inventor/applicant is not inventor for the purposes of all designated States or for the purposes of the United States of America: in such case, write "Continuation of Box No. II" or "Continuation of Box No. III" or "Continuation of Boxes No. II and No. III" (as the case may be), indicate the name of the inventor(s) and, next to (each) such name, the State(s) (and/or, where applicable, ARIPO, Eurasian, European or OAPI patent) for the purposes of which the named person is inventor;
- (iv) if, in addition to the agent(s) indicated in Box No. IV, there are further agents: in such case, write "Continuation of Box No. IV" and indicate for each further agent the same type of information as required in Box No. IV;
- (v) if, in Box No. V, the name of any State (or OAPI) is accompanied by the indication "patent of addition," or "certificate of addition," or if, in Box No. V, the name of the United States of America is accompanied by an indication "continuation" or "continuation-in-part": in such case, write "Continuation of Box No. V" and the name of each State involved (or OAPI), and after the name of each such State (or OAPI), the number of the parent title or parent application and the date of grant of the parent title or filing of the parent application;
- (vi) if, in Box No. VI, there are more than three earlier applications whose priority is claimed: in such case, write "Continuation of Box No. VI" and indicate for each additional earlier application the same type of information as required in Box No. VI;
- (vii) if, in Box No. VI, the earlier application is an ARIPO application: in such case, write "Continuation of Box No. VI", specify the number of the item corresponding to that earlier application and indicate at least one country party to the Paris Convention for the Protection of Industrial Property or one Member of the World Trade Organization for which that earlier application was filed.

2. If, with regard to the precautionary designation statement contained in Box No. V, the applicant wishes to exclude any State(s) from the scope of that statement: in such case, write "Designation(s) excluded from precautionary designation statement" and indicate the name or two-letter code of each State so excluded.

3. If the applicant claims, in respect of any designated Office, the benefits of provisions of the national law concerning non-prejudicial disclosures or exceptions to lack of novelty: in such case, write "Statement concerning non-prejudicial disclosures or exceptions to lack of novelty" and furnish that statement below.

International filing date (day/month/year)
07/04/2000

Priority date (day/month/year)
07/05/1999

Applicant

KONINKLIJKE KPN N.V.

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/EP00/03096

I. Basis of the report

1. With regard to the **elements** of the international application (*Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)*):

Description, pages:

3-5	as originally filed	
1,2	with telefax of	16/03/2001

Claims, No.:

1-4	with telefax of	16/03/2001
-----	-----------------	------------

Drawings, sheets:

1/3-3/3	as originally filed
---------	---------------------

2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language: , which is:

- ☐ the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. The amendments have resulted in the cancellation of:

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/EP00/03096

- ☐ the description, pages:
☐ the claims, Nos.:
☐ the drawings, sheets:

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:
see separate sheet

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes:	Claims	1-4
	No:	Claims	
Inventive step (IS)	Yes:	Claims	
	No:	Claims	1-4
Industrial applicability (IA)	Yes:	Claims	1-4
	No:	Claims	

- 2. Citations and explanations**
see separate sheet

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:
see separate sheet

Concerning Point I

Newly filed pages 1 and 2 of the description don't "match up" with originally filed page 3.

Concerning Point V

- 1) The following documents are cited:
D1: WO 97 36447 A (COLLINS AUGUSTINE ;CUNNINGHAM JOSEPH (IE);
DILLON AIDAN (IE); MARK) 2 October 1997 (1997-10-02)
D2: GB-A-2 322 998 (VODAFONE LTD) 9 September 1998 (1998-09-09)
D3: EP-A-0 512 962 (ERICSSON TELEFON AB L M) 11 November 1992 (1992-
11-11)
D4: EP-A-0 909 104 (ASCOM BUSINESS SYSTEMS AG) 14 April 1999 (1999-
04-14)
D5: EP-A-0 048 868 (SIEMENS AG) 7 April 1982 (1982-04-07)
- 2) A communication system as per the pre-characterizing part of claim 1 is known from (for example) D1 or D2 (cf in particular the first figures of said documents).

The characterising features of claim 1 that "the roaming means are formed by a terrestrial interconnection network, which interconnection network is connected with said several communications networks" are known from D2 (the "International Roaming Platform" 30; see also corresponding parts of description). In this respect it is pointed out that the combination of links 32, 38, 40, 44, gateways 34, 36, 42 and 46 and IRP 30 are to be viewed as an "interconnection network".

The remaining feature of the characterizing part of claim 1 is that the terrestrial interconnection network interconnects "ground stations of a worldwide satellite communications network".

This feature is not explicitly known from D2, thus the novelty (and industrial applicability) of the claims is acknowledged.

With respect to this feature, however, it is noted that it is unclear from the description (let alone the claims) of the current application whether the satellites are actually used for anything (eg transferring roaming data), or whether merely the network comprising the base stations are used for transferring the data.

If it is the latter, then the fact that the means forming the interconnection network are connected to satellite means is irrelevant. What is important is merely that there is a roaming network to which the different communications networks are (for roaming purposes) connected, which is what is described in D2.

If it is the former, then this is what is taught by D1 (cf in particular figure 1 and related parts of description). D1 shows the RIG (Roaming Interworking Gateway) communicating via satellite means (3) for roaming purposes. It is in any case pointed out (cf claim 7 and last paragraph of page 19 of D2) that the use of satellite links for data transfer in mobile communication systems is generally known in the art. It would thus be obvious to the skilled man to use them for transferring roaming data.

In either case, from the starting point of D2 (and, if necessary, taking the teachings of D1 into account), the skilled man would arrive at the subject matter of claim 1 without performing an inventive step. Claim 1 thus fails to meet the requirements of Articles 33(1) and (3) PCT.

- 3) The additional features of dependent claim 2 are known from D1 (cf figure 1).

The additional feature of dependent claim 2 are obvious in the light of D3.

Use of a SIM (cf claim 3) is general in the field of mobile communications (cf also D2 page 5 2nd paragraph or D5, figure).

The additional features of claim 4 are known from D5 (cf passages cited in search report).

Dependent claims 2 - 4 thus add nothing inventive within the meaning of Articles 33(1) and (3) PCT to claim 1.

Concerning Point VIII

- 1) The Summary of the Invention on page 1 (lines 26 - 37) of the description adds information about the advantages and concepts of the current invention that are not contained in the originally filed application. In particular the sentence "The invention is based on the inventive understanding that, ... and thus enable roaming facilities" sets out implied advantages not derivable from the originally filed application documents. Accordingly, these amendments cause the application to contravene Article 34(2)(b) PCT with regard to added subject matter.
- 2) Rule 5.1(b) PCT states that (generally) the order specified in paragraph 5.1(a) PCT shall be followed.

For no apparent reason, in the current application the part of the description according to Rule 5.1(a)(ii) follows the part according to Rule 5.1(a)(iii). Moreover, the part according to Rule 5.1(a)(iv) is missing. Accordingly, these requirements of the PCT are not met.

Communications system having roaming facilities.

BACKGROUND OF THE INVENTION

5 The invention relates to a communications system, comprising several communications networks, and means for facilitating roaming for users on said several communications networks.

10 It is known that PLMN operators [PLMN = Public Land Mobile Network] mutually conclude roaming agreements. Such agreements, which regulate that subscribers of one PLMN may, and can, make use of another PLMN (this is called roaming) so far must always be gone into bilaterally between the several PLMN operators mutually. In addition, technical provisions which make all this possible, such as coupling network signalling, must be undertaken bilaterally. In this manner, roaming additionally is possible only between different PLMNs, but not between PLMNs and PSTNs (= Public Switched Telephone Networks).

SUMMARY OF THE INVENTION

20 It is the object of the invention to overcome said drawbacks. To this end, the invention provides for operators of telecommunications networks, i.e., PLMNs or PSTNs, to each conclude a bilateral roaming agreement with a global terrestrial interconnection network, actually only, or at least primarily installed for the interconnection of groundstations of a worldwide satellitecommunications network (= SCN). The invention is based on the inventive understanding that, although said ground station interconnection network actually is set up for the interconnection of ground stations all over the world, said interconnection network is also useable and even -after some rather minor system adaptations- fit for interconnecting local or national networks and thus enabling roaming facilities. In doing so the technical means are provided for realising said roaming agreements. By way of only one agreement, namely, by the SCN, each PLMN or PSTN, as the case may be, receives roaming facilities with all other PLMNs and PSTNs which have also concluded such an agreement with the SCN. The

telecommunications network concluding an agreement with the SCN should, for the purpose of realising said agreement, bring about a signalling coupling with the SCN. The SCN then provides signalling links with all
5 telecommunications networks with which a roaming agreement has been concluded as well. There is therefore required only one signalling link with the SCN to obtain roaming with all networks connected to the SCN. The invention is based on the insight that an SCN, apart from as a platform
10 for satellite communication, due to its far-reaching global setup and arrangement, is extremely suitable as a roaming platform ("facilitator") for different PLMNs and PSTNs.

It is noted that WO9736447 discloses a roaming
15 interworking gateway for mobile telecommunications systems. In the known system no use is made of a (global) terrestrial network for the interconnection of satellite ground stations. The understanding of our present invention is to make use, for interconnecting and roaming-
20 enabling of local networks, of an already existing, worldwide network which, however, until the present invention, served as a global interconnection network for only satellite ground stations. So, according to the invention, said network is additionally used for the
25 interconnection of local telecommunications networks which, as such, have nothing to do with satellite communication.

IMPLEMENTATION

30 Below, the invention will be further explained by reference to several figures.

A calling user of a mobile terminal has a SIM card (SIM = Secure Identification Module) in which there is programmed an IMSI (= International Mobile Subscriber
35 Identity). The IMSI consists of 15 positions, the first three of which standard denote the country of origin of the Network Operator (= NO) of the mobile user, the fourth and fifth denote the NO of the mobile user and the remaining ten positions may be freely completed by the NO.
40 In the IMSI of users of an NO who - according to the invention - has concluded an agreement with the SCN, the

AMENDED SHEET

CLAIMS

1. Communications system, comprising several communications networks, and roaming means for facilitating roaming to users on said several communications networks, CHARACTERISED IN THAT the roaming means are formed by a terrestrial interconnection network, interconnecting groundstations of a worldwide satellite-communications network (SCN), which interconnection network is connected with said several communications networks (PLMN, PSTN).

2. Communications system according to claim 1, CHARACTERISED IN THAT said interconnection network (SCN) comprises means for assigning, said communications networks (PLMN, PSTN), a code (VNO) and for entering it, under control of a control module (CTR), into a register (VCR), said interconnection network, under control of the control module, realising mutual roaming facilities to subscribers of each of said communications networks entered into the register.

3. Communications system according to claim 2, CHARACTERISED IN THAT terminals of the subscribers to the communications networks (PLMN, PSTN) comprise an identification module (SIM) for reading in and passing on, to the communications system, identification codes (IMSI), a code (VNO) among them which corresponds to the code entered into the register (VCR).

4. Communications system according to claim 2, CHARACTERISED IN THAT said interconnection network (SCN) determines the location of a roaming user on a wireline network (PSTN) on the basis of the A-number of the terminal to which the terminal on the network is connected.

3/PRK
Communications system having roaming facilities. **ART 34 AMDT**BACKGROUND OF THE INVENTION

5 The invention relates to a communications system, comprising several communications networks, and means for facilitating roaming for users on said several communications networks.

10 It is known that PLMN operators [PLMN = Public Land Mobile Network] mutually conclude roaming agreements. Such agreements, which regulate that subscribers of one PLMN may, and can, make use of another PLMN (this is called roaming) so far must always be gone into bilaterally between the several PLMN operators mutually. In addition, technical provisions which make all this possible, such as coupling network signalings, must be undertaken bilaterally. In this manner, roaming additionally is possible only between different PLMNs, but not between PLMNs and PSTNs (= Public Switched Telephone Networks).

SUMMARY OF THE INVENTION

20 It is the object of the invention to overcome said drawbacks. To this end, the invention provides for operators of telecommunications networks, i.e., PLMNs or PSTNs, to each conclude a bilateral roaming agreement with a global terrestrial interconnection network, actually only, or at least primarily installed for the interconnection of groundstations of a worldwide satellitecommunications network (= SCN) The invention is based on the inventive understanding that, although said ground station interconnection network actually is set up for the interconnection of ground stations all over the world, said interconnection network is also useable and even -after some rather minor system adaptations- fit for interconnecting local or national networks and thus enabling roaming facilities. In doing so the technical means are provided for realising said roaming agreements. By way of only one agreement, namely, by the SCN, each PLMN or PSTN, as the case may be, receives roaming facilities with all other PLMNs and PSTNs which have also concluded such an agreement with the SCN. The

telecommunications network concluding an agreement with the SCN should, for the purpose of realising said agreement, bring about a signalling coupling with the SCN. The SCN then provides signalling links with all telecommunications networks with which a roaming agreement has been concluded as well. There is therefore required only one signalling link with the SCN to obtain roaming with all networks connected to the SCN. The invention is based on the insight that an SCN, apart from as a platform for satellite communication, due to its far-reaching global setup and arrangement, is extremely suitable as a roaming platform ("facilitator") for different PLMNs and PSTNs.

It is noted that WO9736447 discloses a roaming interworking gateway for mobile telecommunications systems. In the known system no use is made of a (global) terrestrial network for the interconnection of satellite ground stations. The understanding of our present invention is to make use, for interconnecting and roaming-enabling of local networks, of an already existing, worldwide network which, however, until the present invention, served as a global interconnection network for only satellite ground stations. So, according to the invention, said network is additionally used for the interconnection of local telecommunications networks which, as such, have nothing to do with satellite communication.

IMPLEMENTATION

Below, the invention will be further explained by reference to several figures.

A calling user of a mobile terminal has a SIM card (SIM = Secure Identification Module) in which there is programmed an IMSI (= International Mobile Subscriber Identity). The IMSI consists of 15 positions, the first three of which standard denote the country of origin of the Network Operator (= NO) of the mobile user, the fourth and fifth denote the NO of the mobile user and the remaining ten positions may be freely completed by the NO. In the IMSI of users of an NO who - according to the invention - has concluded an agreement with the SCN, the

first (three) digits of the field to be freely completed constitute a VNO code (VNO = Virtual Network Operator). Said VNO code is assigned, by a control module of the SCN, to each PLMN or PSTN with which the SCN, as may be seen from an entry into a VNO-code register (= VCR), has concluded a bilateral roaming agreement. It should be noted that a VNO is understood to mean an organisation managing a communications system having one or more network working elements (e.g., an HLR [= Home Location Register]) with which the VNO may add value to a base telecommunications service. In doing so, the VNO disposes, or not, of its own network (PLMN or PSTN).

PLMN subscribers roaming on a guest PLMN

When a (calling) user switches on his mobile terminal, a link is established between the mobile terminal and a VNO base station (in this case a PLMN) where the user wants to roam. In this case, the mobile terminal transmits the IMSI number of the SIM. The VNO network attempts to analyse at least the first 8 positions, in order to determine whether it concerns a home user (client of the own PLMN) or a roaming user (client of another PLMN). If analysis on the first 8 positions is impossible, or it concerns a roaming user, it is determined, on the basis of the first 5 positions, whether a roaming agreement has been concluded between the PLMN and the SCN. If, according to the contents of the VCR, a roaming agreement does indeed exist, a request for information on the user is placed, by way of signalling, with the SCN, which carries out an analysis on the VNO code to determine to which VNO the request must be passed on. The VNO will make available the requested information, by way of signalling, to the satellite network, which passes it on to the guest PLMN. If the calling user is accepted by the guest PLMN, said information will be stored in the home PLMN in a Home Location Register (= HLR) and in the guest PLMN in a Visiting Location Register (= VLR). The costs of the communication by way of the PLMN are charged to the calling user by the home network.

Said procedures are in agreement with the current procedures laid down for roaming, and both said procedures and the means serving to carry them out are generally known.

5

Roaming on nonmobile networks

A nonmobile network (PSTN) may also facilitate roaming of mobile users or clients of another PSTN, provided that said PSTN is extended with the option of being capable of identifying and recording users; to this end, it should dispose of several network elements, such as HLR, VLR, Authentication Centre, Extended memory. Identification is effected by means of the IMSI on a SIM card and peripheral equipment made suitable for this purpose in the PSTN or a cordless-identification option.

15

PLMN- or PSTN-subscriber roaming on a PSTN

If a calling user ends up within the range of a transceiver station connected to a PSTN of a cordless system (e.g., a DECT [= Digital Enhanced Cordless Telecommunications]) and he disposes of a set wherein cordless communication is possible, he may make use of communication by way of the PSTN. Identification and communication between the PSTN and the SCN, and between the SCN and the home PLMN, is effected in accordance with the description above. The costs of the communication by way of the PSTN are charged to the calling user by the home network.

20

25

Due to the absence of a base station which determines the location of the roaming user (such as in the PLMN), the location of the roaming user on the PSTN is determined on the basis of the Anumber (country code + network code + subscriber number) of the terminal to which the cordless transceiver station is connected. The user is accessible on the PSTN by way of his own (mobile) telephone number.

30

35

PSTN subscribers roaming on a PLMN or PSTN

Wireline terminals may also make use of the aforementioned facilities. The terminal of a calling user does have to be provided with a SIM card identical to a SIM card for mobile terminals in PLMN networks. When the SIM card is inserted into a (public) terminal suitable for

40

that purpose, identification and communication between the PSTN and the SCN, and between the SCN and the home PLMN or home PSTN, take place in accordance with the procedure described above. Due to the absence of a base station which determines the location of the roaming user (such as in the PLMN), the location of the roaming user on the PSTN is determined on the basis of the A number (country code + network code + subscriber number) of the terminal to which the (public) terminal is connected. The user is accessible on the wireline set (PSTN) by way of his own (mobile) telephone number.

The costs of the communication by way of the PSTN are charged to the calling user by the home PSTN or home PLMN.

The enclosed figures provide an illustration of the invention. FIG. 1 shows the state of the art, in which several PLMNs conclude agreements with one another, and establish signalling channels and control modules for realising roaming facilities for the subscribers of said several PLMNs. FIG. 2 shows the architecture according to the invention, PLMNs and also PSTNs realising roaming facilities by way of a Satellite-Communications Network (= SCN) which is used here as a common roaming platform (facilitator). FIG. 3 shows a further elaboration of FIG. 2. An SCN connects several Land Earth Stations (= LESs) to one another. These are the earth stations for satellite communication. The satellites with which said earth stations are communicating have not been drawn since said satellites per se have no function in the system according to the present invention. In conformity with the invention, the SCN - apart from the standard function of facilitating communication by way of satellites - accomplishes the function of facilitating roaming for subscribers who have entirely different operator networks, PSTNs and PLMNs, as their home network, in other words, to which they are subscribing. In conformity with the invention, operators of different PLMNs or PSTNs each conclude a bilateral roaming agreement with the SCN. The technical means for realising said agreements between the several PLMNs and PSTNs, respectively, and the SCN, comprise a register, the Virtual Network Operator Code

Register VCR, which is located within the SCN, and may be approached under control of a control module CTR.

The VCR may consist of one register, which may be approached and interrogated by the several LESs; if so
5 desired, each LES may be provided with a copy VCR - to be continuously kept up to date - having (distributed) control means (CTRs). By way of one agreement with the SCN, technically to be realised by assigning, to the PLMN or PSTN, a VNO code (= VNC) and entering said VNC into the
10 VCR, each PLMN or PSTN, respectively, entered into the VCR obtains roaming facilities with all other PLMNs and PSTNs entered into the VCR. Upon entry into the VCR, there is also realised - under control of the control module CTR - a signalling coupling (interface) between the PLMN and
15 PSTN entered, respectively, and the SCN. By way of the SCN, all entered PLMNs and PSTNs are then capable of exchanging signalling traffic - in this case, roaming information - with one another. This way, the SCN is used, apart from as a platform for satellite
20 communication, by way of the VCR and the signalling couplings corresponding thereto, as an interworking platform for facilitating roaming between the several PLMNs and PSTNs.

As indicated above, the system proposed by the
25 invention makes use of SIM cards having an IMSI adjusted for roaming. Such a SIM card is shown in FIG. 4. Standard are the country and operator codes, five characters in all. The ten remaining character positions not laid down in standards, are used in the system
30 according to the invention for laying down, inter alia, the VNO code (three characters) of the home PLMN or PSTN, respectively.

CLAIMS

1. Communications system, comprising several communications networks, and roaming means for facilitating roaming to users on said several
5 communications networks, CHARACTERISED IN THAT the roaming means are formed by a terrestrial interconnection network, interconnecting groundstations of a worldwide satellite-communications network (SCN), which interconnection network is connected with said several communications
10 networks (PLMN, PSTN).
2. Communications system according to claim 1, CHARACTERISED IN THAT said interconnection network (SCN) comprises means for assigning, said communications networks (PLMN, PSTN), a code (VNO) and for entering it,
15 under control of a control module (CTR), into a register (VCR), said interconnection network, under control of the control module, realising mutual roaming facilities to subscribers of each of said communications networks entered into the register.
- 20 3. Communications system according to claim 2, CHARACTERISED IN THAT terminals of the subscribers to the communications networks (PLMN, PSTN) comprise an identification module (SIM) for reading in and passing on, to the communications system, identification codes (IMSI),
25 a code (VNO) among them which corresponds to the code entered into the register (VCR).
4. Communications system according to claim 2, CHARACTERISED IN THAT said interconnection network (SCN) determines the location of a roaming user on a wireline
30 network (PSTN) on the basis of the A-number of the terminal to which the terminal on the network is connected.

ABSTRACT

Communications system, comprising several communications networks, and roaming means for
5 facilitating roaming of users on said several communications networks. The roaming means are formed by a worldwide (satellite-)communications network (SCN), which is in connection with each of said several communications networks (PLMN, PSTN). The satellite-
10 communications network (SCN) assigns a code (VNO) to each of said several communications networks (PLMN, PSTN) and enters, under control of a control module (CTR) into a register (VCR), the satellite-communications network, under control of the control module, realising mutual
15 roaming facilities to subscribers of each of said entered communications networks. The terminals of the subscribers of the communications networks (PLMN, PSTN) comprise an identification module (SIM) for reading in and passing on identification codes (IMSI), a code (VNO) among them which
20 corresponds to the code (VNO) entered into the register (VCR).

(54) Title: COMMUNICATIONS SYSTEM HAVING ROAMING FACILITIES

(57) Abstract

Communications system, comprising several communications networks, and roaming means for facilitating roaming of users on said several communications networks. The roaming means are formed by a worldwide (satellite-) communications network (SCN), which is in connection with each of said several communications networks (PLMN, PSTN). The satellite-communications network (SCN) assigns a code (VNO) to each of said several communications networks (PLMN, PSTN) and enters, under control of a control module (CTR) into a register (VCR), the satellite-communications network, under control of the control module, realising mutual roaming facilities to subscribers of each of said entered communications networks. The terminals of the subscribers of the communications networks (PLMN, PSTN) comprise an identification module (SIM) for reading in and passing on identification codes (IMSI), a code (VNO) among them which corresponds to the code (VNO) entered into the register (VCR).

Communications system having roaming facilities.

BACKGROUND OF THE INVENTION

The invention relates to a communications system, comprising
5 several communications networks, and means for facilitating roaming
for users on said several communications networks.

It is known that PLMN operators [PLMN = Public Land Mobile
Network] mutually conclude roaming agreements. Such agreements,
which regulate that subscribers of one PLMN may, and can, make use of
10 another PLMN (this is called roaming) so far must always be gone into
bilaterally between the several PLMN operators mutually. In
addition, technical provisions which make all this possible, such as
coupling network signalling, must be undertaken bilaterally. In
this manner, roaming additionally is possible only between different
15 PLMNs, but not between PLMNs and PSTNs (= Public Switched Telephone
Networks).

SUMMARY OF THE INVENTION

It is the object of the invention to overcome said drawbacks.
20 To this end, the invention provides for operators of
telecommunications networks, i.e., PLMNs or PSTNs, to each conclude a
bilateral roaming agreement with a global communications network - to
which a satellite-communications network (= SCN) is particularly
suited - and that in doing so the technical means are provided for
25 realising said agreement. By way of only one agreement, namely, by
the SCN, each PLMN or PSTN, as the case may be, receives roaming
facilities with all other PLMNs and PSTNs which have also concluded
such an agreement with the SCN. The telecommunications network
concluding an agreement with the SCN should, for the purpose of
30 realising said agreement, bring about a signalling coupling with the
SCN. The SCN then provides signalling links with all
telecommunications networks with which a roaming agreement has been
concluded as well. There is therefore required only one signalling
link with the SCN to obtain roaming with all networks connected to
35 the SCN. The invention is based on the insight that an SCN, apart
from as a platform for satellite communication, due to its far-
reaching global setup and arrangement, is extremely suitable as a
roaming platform ("facilitator") for different PLMNs and PSTNs.

IMPLEMENTATION

Below, the invention will be further explained by reference to several figures.

A calling user of a mobile terminal has a SIM card (SIM = Secure Identification Module) in which there is programmed an IMSI (= International Mobile Subscriber Identity). The IMSI consists of 15 positions, the first three of which standard denote the country of origin of the Network Operator (= NO) of the mobile user, the fourth and fifth denote the NO of the mobile user and the remaining ten positions may be freely completed by the NO. In the IMSI of users of an NO who - according to the invention - has concluded an agreement with the SCN, the first (three) digits of the field to be freely completed constitute a VNO code (VNO = Virtual Network Operator). Said VNO code is assigned, by a control module of the SCN, to each PLMN or PSTN with which the SCN, as may be seen from an entry into a VNO-code register (= VCR), has concluded a bilateral roaming agreement. It should be noted that a VNO is understood to mean an organisation managing a communications system having one or more network working elements (e.g., an HLR [= Home Location Register]) with which the VNO may add value to a base telecommunications service. In doing so, the VNO disposes, or not, of its own network (PLMN or PSTN).

PLMN subscribers roaming on a guest PLMN

When a (calling) user switches on his mobile terminal, a link is established between the mobile terminal and a VNO base station (in this case a PLMN) where the user wants to roam. In this case, the mobile terminal transmits the IMSI number of the SIM. The VNO network attempts to analyse at least the first 8 positions, in order to determine whether it concerns a home user (client of the own PLMN) or a roaming user (client of another PLMN). If analysis on the first 8 positions is impossible, or it concerns a roaming user, it is determined, on the basis of the first 5 positions, whether a roaming agreement has been concluded between the PLMN and the SCN. If, according to the contents of the VCR, a roaming agreement does indeed exist, a request for information on the user is placed, by way of signalling, with the SCN, which carries out an analysis on the VNO code to determine to which VNO the request must be passed on. The VNO will make available the requested information, by way of signalling, to the satellite network, which passes it on to the guest PLMN. If the calling user is accepted by the guest PLMN, said

information will be stored in the home PLMN in a Home Location Register (= HLR) and in the guest PLMN in a Visiting Location Register (= VLR). The costs of the communication by way of the PLMN are charged to the calling user by the home network.

5 Said procedures are in agreement with the current procedures laid down for roaming, and both said procedures and the means serving to carry them out are generally known.

Roaming on nonmobile networks

10 A nonmobile network (PSTN) may also facilitate roaming of mobile users or clients of another PSTN, provided that said PSTN is extended with the option of being capable of identifying and recording users; to this end, it should dispose of several network elements, such as HLR, VLR, Authentication Centre, Extended memory. Identification is
15 effected by means of the IMSI on a SIM card and peripheral equipment made suitable for this purpose in the PSTN or a cordless-identification option.

PLMN- or PSTN-subscriber roaming on a PSTN

20 If a calling user ends up within the range of a transceiver station connected to a PSTN of a cordless system (e.g., a DECT [= Digital Enhanced Cordless Telecommunications]) and he disposes of a set wherein cordless communication is possible, he may make use of communication by way of the PSTN. Identification and communication
25 between the PSTN and the SCN, and between the SCN and the home PLMN, is effected in accordance with the description above. The costs of the communication by way of the PSTN are charged to the calling user by the home network.

30 Due to the absence of a base station which determines the location of the roaming user (such as in the PLMN), the location of the roaming user on the PSTN is determined on the basis of the A-number (country code + network code + subscriber number) of the terminal to which the cordless transceiver station is connected. The user is accessible on the PSTN by way of his own (mobile) telephone
35 number. *PSTN subscribers roaming on a PLMN or PSTN*

40 Wireline terminals may also make use of the aforementioned facilities. The terminal of a calling user does have to be provided with a SIM card identical to a SIM card for mobile terminals in PLMN networks. When the SIM card is inserted into a (public) terminal suitable for that purpose, identification and communication between the PSTN and the SCN, and between the SCN and the home PLMN or home

PSTN, take place in accordance with the procedure described above. Due to the absence of a base station which determines the location of the roaming user (such as in the PLMN), the location of the roaming user on the PSTN is determined on the basis of the A number (country code + network code + subscriber number) of the terminal to which the (public) terminal is connected. The user is accessible on the wireline set (PSTN) by way of his own (mobile) telephone number.

The costs of the communication by way of the PSTN are charged to the calling user by the home PSTN or home PLMN.

The enclosed figures provide an illustration of the invention. FIG. 1 shows the state of the art, in which several PLMNs conclude agreements with one another, and establish signalling channels and control modules for realising roaming facilities for the subscribers of said several PLMNs. FIG. 2 shows the architecture according to the invention, PLMNs and also PSTNs realising roaming facilities by way of a Satellite-Communications Network (= SCN) which is used here as a common roaming platform (facilitator). FIG. 3 shows a further elaboration of FIG. 2. An SCN connects several Land Earth Stations (= LESS) to one another. These are the earth stations for satellite communication. The satellites with which said earth stations are communicating have not been drawn since said satellites per se have no function in the system according to the present invention. In conformity with the invention, the SCN - apart from the standard function of facilitating communication by way of satellites - accomplishes the function of facilitating roaming for subscribers who have entirely different operator networks, PSTNs and PLMNs, as their home network, in other words, to which they are subscribing. In conformity with the invention, operators of different PLMNs or PSTNs each conclude a bilateral roaming agreement with the SCN. The technical means for realising said agreements between the several PLMNs and PSTNs, respectively, and the SCN, comprise a register, the Virtual Network Operator Code Register VCR, which is located within the SCN, and may be approached under control of a control module CTR.

The VCR may consist of one register, which may be approached and interrogated by the several LESS; if so desired, each LES may be provided with a copy VCR - to be continuously kept up to date - having (distributed) control means (CTRs). By way of one agreement with the SCN, technically to be realised by assigning, to the PLMN or PSTN, a VNO code (= VNC) and entering said VNC into the VCR, each PLMN or PSTN, respectively, entered into the VCR obtains roaming

facilities with all other PLMNs and PSTNs entered into the VCR. Upon entry into the VCR, there is also realised - under control of the control module CTR - a signalling coupling (interface) between the PLMN and PSTN entered, respectively, and the SCN. By way of the SCN, all entered PLMNs and PSTNs are then capable of exchanging signalling traffic - in this case, roaming information - with one another. This way, the SCN is used, apart from as a platform for satellite communication, by way of the VCR and the signalling couplings corresponding thereto, as an interworking platform for facilitating roaming between the several PLMNs and PSTNs.

As indicated above, the system proposed by the invention makes use of SIM cards having an IMSI adjusted for roaming. Such a SIM card is shown in FIG. 4. Standard are the country and operator codes, five characters in all. The ten remaining character positions not laid down in standards, are used in the system according to the invention for laying down, inter alia, the VNO code (three characters) of the home PLMN or PSTN, respectively.

CLAIMS

1. Communications system, comprising several communications networks, and roaming means for facilitating roaming to users on said
5 several communications networks, CHARACTERISED IN THAT the roaming means are formed by a worldwide communications network (SCN), which is in connection with each of said several communications networks (PLMN, PSTN).

10 2. Communications system according to claim 1, CHARACTERISED IN THAT the roaming means are formed by the earth portion of a worldwide satellite-communications network (SCN), which is in connection with each of said several communications networks (PLMN, PSTN).

15 3. Communications system according to claim 1, CHARACTERISED IN THAT the worldwide communications network (SCN) assigns, to each of said several communications networks (PLMN, PSTN), a code (VNO) and enters it, under control of a control module (CTR), into a register (VCR), the worldwide communications network, under control of the control
20 module, realising mutual roaming facilities to subscribers of each of said communications networks entered into the register.

25 4. Communications system according to claim 3, CHARACTERISED IN THAT terminals of the subscribers to the communications networks (PLMN, PSTN) comprise an identification module (SIM) for reading in and passing on, to the communications system, identification codes (IMSI), a code (VNO) among them which corresponds to the code entered into the register (VCR).

30 5. Communications system according to claim 3, CHARACTERISED IN THAT the worldwide communications network (SCN) determines the location of a roaming user on a wireline network (PSTN) on the basis of the A-number of the terminal to which the terminal on the network is connected.
